

**BOILERS**

**The Perfect**

**10**

**INTERGAS®**  
BOILERS

**Our range of Intergas Combi Compact boilers has one thing in common... reliability.**

**Here are 10 good reasons why Intergas won't let you down.**

**1**

**Built to last**

What is these days?  
Our heat exchanger – it's never had a mechanical failure in over 20 years.

**2**

**Workaholic**

Condenses 100% of the time in both heating and hot water modes with virtually no standby losses. No other boiler can do this.

**3**

**Life saver**

Typically reducing emissions by 20% and shaving up to a further 5% off energy bills over other condensing boilers.

**4**

**Exceptional flow rate**

Even in areas where water pressure is as low as 0.2 bar, ours always deliver.

**5**

**No problems**

No diverter valve, no valve motor, no auto air vent, no secondary hot water plate heat exchanger.

## ACTUALLY THERE ARE MORE THAN 10 REASONS

Want to know what they are?

BOILERS

6

### Plastic's fantastic

But not in a boiler – that's why we only use three\* plastic components.

*\*The pressure sensor, ignition module and internal flue.*

7

### Hot water on tap

Direct hot water is served by a separate circuit in the boiler so, should the pump fail, the system will always deliver hot water.

8

### Remote control

Using our remote management system\*, on your phone or computer, will prevent an issue from becoming one – wherever you are.

*\*Currently only available with the ECO RF model.*

9

### Don't get caught short

With only 12 components in the boiler you don't need many spares. Ours are all kept in one large briefcase for a first time fix.

10

### Five boilers in one

It can be converted to heat only, sealed system, open vent, open vent combi and a multipoint water heater – that's flexible!

**There will be an Intergas boiler that's perfect for you. Our website describes each range in detail.**

**If you'd prefer a brochure, just call us or request one online.**
